Tobacco Hardens the Arteries, Overtaxes the Heart and Shortens Life

Says Dr. Connor, Who Suggests a Simple Test to Find If It Is Hurting You. Can You Stand It?

New York—Dr. Connor, formerly of Johns Hopkins hospital, says: "Hundreds of thousands of men who smoke and chew and who believe themselves healthy are suffering from progressive organic ailments. They would not have been afflicted had it not been for the use of tobacco and most of them would not be here today if they would stop the use of tobacco. The best known habit forming principal of tobacco is nicotine, but the most deadly and demoralizing is furfural. Both are deadly poisons, which, when absorbed by the system slowly but surely, affect the nerves, membranes, tissues, vital organs and vitality of the body. The harmful effect of tobacco varies and depends on circumstances and the individual. In some it causes general debility, others catarrh of the throat, indigestion, constipation, extreme nervousness, sleeplessness, loss of memory, lack of will power, cowardice and fear, mental confusion, etc.; in others it causes hardening of the arteries, palpitation of the heart, tuberculosis, blindness, cancer and the common affliction known as tobacco heart. If you use tobacco in any form you easily detect its harmful effects by making a full page from a book. If your vision becomes blurred, hoarse and in your throat, the chances are that your throat is affected by catarrh and it may be the beginning of very serious catarrhal trouble. Next, in the morning, be-

definite arrangements of the league could not be decided upon.
